

A Laboratory Guide for Students in Physical Sciences

Filesize: 1.96 MB

Reviews

*An exceptional ebook and also the typeface applied was intriguing to read through. I have got read and i also am sure that i am going to likely to go through yet again once more in the foreseeable future. I discovered this pdf from my dad and i advised this ebook to find out.

A LABORATORY GUIDE FOR STUDENTS IN PHYSICAL SCIENCES

To read **A Laboratory Guide for Students in Physical Sciences** PDF, remember to follow the button beneath and download the ebook or get access to additional information which are have conjunction with **A LABORATORY GUIDE FOR STUDENTS IN PHYSICAL SCIENCES** book.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: . be determined, from the same paper, and weigh it on the same balance. Then the area of the figure is equal to its weight divided by that of the square. The balance is one of the most important measuring instruments, and one of the most accurate. For this reason it is desirable to reduce, whenever possible, measurements of high accuracy to that of weight. The sensitiveness of a certain balance is defined as the angle through which it will turn when the difference between the weights in the pans is lmg . Thus, if s stands for sensitiveness, d for the angle of deflection when the difference in the weights is p mgr., then $s = d/p$. A more convenient form for computing the sensitiveness is derived as follows. Let (Fig. 8) l stand for the length of either arm of the balance, w the weight of the beam, with the center of gravity at G , P and p the weights in the pan and their difference respectively, then, for a deflection θ , when equilibrium is reached, we have $(P + p)l \cos \theta = Pl \cos \theta + wd \sin \theta$, where d is the distance of θ from the fulcrum. From this it follows $\tan \theta = pl/wd$. We see from this that the sensitiveness is independent of the load P on the pans. However, if we consider the fact that the beam is not absolutely rigid, it can readily be followed that the...
